

For many people, hair transplant surgery, also known as restoration, can help bring back the appearance of a fuller head of hair. Hair loss is very common, affecting both men and women. However, with the latest techniques we can offer a permanent solution to this problem.

What are the benefits of hair transplant surgery?

- Improved appearance
- Greater self confidence
- Permanent solution to hair loss
- Feels and looks natural
- Fast results

We are now able to transplant individual hair follicles from one part of the body to another, whilst preserving their growth physiology and anatomy. This permanent solution means that the transplanted hair follicles will survive and grow normal.

Each follicle is transplanted manually one by one. Hair transplant techniques have come a long way from the old punch graft techniques, which created an unnatural 'doll hair' appearance.

We specialise in hair restoration for both men and women. Our techniques can be used to restore depleted eyebrows, eyelashes, beards and transplantation within scars such as burns in hair bearing areas.

This procedure is carried out under long lasting local anaesthetic, which makes the slow process of hair transplantation virtually painless.

At Bella You we are one of the leading specialists in hair transplant surgery and hair restoration procedures in the United Kingdom. With an unrivalled level of service and knowledge, our cosmetic surgeons will work with you every step of the way to give you the results you want.
